Notes

Push Feel

Building upon the success of the their V1 predecessors, the Taro N Sweet Potato V2s are BSUN-made linears with LY stems and bottom housings that collide to make a firm, flat feeling bottom out that is noticeable but not overly aggressive at the tail end of a ~50 gf. stroke. While the topping out onto POK top housings isn't as firm or solid, it hardly detracts from the bottom out at all. Overall the switches are incredibly well lubed and consistently so across the batch that I received, having only minor variations that cause some switches to feel different from others.

Wobble

Present more so in the N/S direction than the E/W direction, the Taro N Sweet Potato V2 switches have little enough stem wobble as to likely not have to bother most users.

Sound

The sound profile of the Taro N Sweet Potato V2 switches is one that is clear, crisp, and very singularly their bottom out sound. Popping with a roundedness and depth that doesn't make them sound sharp or pointy, they still carry enough volume and presence to be the clear driving force of these switches. Paired up with no sounds from scratch or ping as a result of their factory lubing and an, at best, softer accessory topping out that is a bit thinner and less full feeling, these are great examples of how to make stem pole bottom out switches that aren't super aggressive.

Context

Priced around \$0.50 per switch depending on where they are purchased from, as a continuation of a multi-year line of dessert themed releases from Keebz N Cables these have a lot of the support that most switches could only dream of. As a result of their continual renewal and improvement of these releases, though, these V2 versions do likely have a limited shelf life.

Other

Despite being clean, well-executed, and consistent linears for their price, they also don't take much risk nor have as much of a unique characteristic twist as other switches this notable.
