Notes

Push Feel

Featuring a mid-stroke, canonically light tactile bump alongside LICHICX's firm, non-squishy stem dampening design, these Wingtree-made switches are a light tactile fan's silent switch dream come true. The housing collisions are firm, the bump is well centered and with just enough kickback to let you know that its there, and the strokes are fairly smooth overall. Minor inconsistencies from switch to switch as well as some having slightly scratchier feelings than others are really the only marks against these switches, though they are admittedly minor.

Wobble

Equal in magnitude in both N/S and E/W directions, the Wingtree x LICHICX Orange switches have a small, very likely to be unproblematic amount of stem wobble for most users.

Sound

Like many other LICHICX-based silent switches from over the years, the Orange silent tactiles have very little noise to them overall, with really the only sound being present in these switches are small subtle bass notes at bottom out and occasional subtle scratch that matches the push feeling notes above. Overall, the light tactility of these switches only further aids this category as it interacts with the leaves in such a minor way as to not introduce any further noise itself.

Context

Priced at \$0.40 per switch and backed by Unikeys, these switches are just a drop in the bucket of Wingtree's flooding revival of the LICHICX molds that they acquired. While these particular switches may be more desirable on account of their lighter tactility, the reality is that there is no telling just how many switches like these will survive the initial glut of offerings in this style as traditionally manufacturers who 'flood the zone' like this inevitably pull back strongly.

Other

While more supported in recent years, very lightly tactile silent switches has historically been an underserved niche of switches and these make an excellent inclusion for fans of such.
