Keygeek Cera X (48g)		
Switch Type: Linear		Keygeek
28	/35	Push Feel
21	/25	Wobble
7	/10	Sound
11	/20	Context
5	/10	Other
72	/100	Total

Notes

Push Feel

The Keygeek Cera X are freshly designed and molded linears from Keygeek featuring a never before seen ceramic powder infused POM bottom housing material (X2) and copious factory lubing to give them a deep and firm overall feeling. To that end, they achieve all of these things as the switches are not just smooth beyond smooth but also feature deep, firm, and somewhat soft housing collisions. It should be noted though that some switches have a bit of gumminess and/or stickiness to them at various parts on account of that factory lubing.

Wobble

Equal in magnitude in both N/S and E/W directions, the Cera X switches have a reasonable amount of stem wobble for Keygeek that is slightly better than the running average for this metric by all manufacturers I've looked at to date.

Sound

These switches have a surprisingly deep, compact, and muted sound to them that makes them sound like the idealized version of the classic full-nylon switch sound that so many people chase after. With a very deep, not-at-all-pointed bottom out and matching deep topping out, the only issue with the sound of these switches is some gummy/squishy tones that mirror the push feeling notes above – something which becomes much more noticeable at higher typing speeds.

Context

Priced around the ~\$0.30-0.35 per switch mark, these have not enjoyed as much community awareness as other Keygeek switches and I'm genuinely not sure as to why. These definitely are more than deserving of attention and could see parts such as the housing materials be reused in other switches moving forward if they have a little bit of marketing push behind them.

Other

While the ceramic powder infusion is clearly carrying a lot of weight here, these are among the best sounding POM-based bottom housings I've heard to date in any switch from anyone!
