Notes

Push Feel

Building off of the design of the Wingtree BM10 switches and a presumed goal at matching the iconic Sillyworks x Gateron Type Rs, the Wingtree BM11s are medium-strong tactile switches with an early punching, long unfurling bump that bottoms out onto its stem pole fairly quickly with only a tiny linear travel afterwards. Unlike the Type Rs and related offshoots, though, the BM11s use a fiberglass reinforced polycarbonate bottom housing that gives a surprising depth, complexity and fullness to their feeling. While definitely still heavy and likely fatiguing to type on for most, these feel way more substantial and firm than some other glass cannon tactiles.

Wobble

There is a shocking lack of N/S and E/W direction stem wobble that is quite consistent across the batch that I received. I'm incredibly impressed by Wingtree here.

Sound

The same depth and richness of the bottom out feeling of the Wingtree BM11s extends to their sound profile here where their bottom outs are definitely more noticeable and forceful on the ears, though without any of the sharpness, pointiness, or any other harsh noises that these kinds of tactiles tend to pack in. As well, these are fairly well lubed as to not have much, if any sound in them due to scratch.

Context

Priced at \$0.35 per switch these genuinely are a steal for their quality. With some worldwide pick up by vendors, the only reason that these have not gotten as popular as they should be is on account of the sparse, if not altogether completely absent marketing by Wingtree. Literally any efforts to market these switches could see them be huge hits among tactile fans.

Other

While fiberglass inclusions are far from a new concept for switch housing materials, it is incredibly well executed here in Wingtree and makes me incredibly excited for more.
