Gravastar UFO Purple

Switch Type: Linear		Unknown
30	/35	Push Feel
22	/25	Wobble
7	/10	Sound
10	/20	Context
10	/10	Other
79	/100	Total

Notes

Push Feel

With an out of this world, clearly aesthetic-first design, the actual push feeling of these medium weight, ~52 gf. bottom out linear Hall Effect switches is definitely among their most boring feature. These switches are smooth with a perfect amount of factory lubrication, feature no scratch or spring ping, and have a bottom out that is bassy, a bit snappy, and is accented well on the top end by a slightly smaller, complementary topping out. All positive notes, just admittedly a bit plain by all linear switch standards.

Wobble

There's very little N/S and E/W direction stem wobble in the stock Gravastar UFO Purple switches that is highly unlikely to bother any user unless they are super picky about such.

Sound

The sound profile of the UFO Purples is one that is largely driven by their bottom outs, giving these switches a medium volumed, snappy bottom out that is a bit wide, a bit nuanced, and has a tiny bit of flair to them. With some movement in the pitch and volume of these throughout different typing speeds and not all that much nuance or specific niche that they fit into in terms of sound, it is again a bit basic and boring for a switch as stunning as these.

Context

Priced at cheapest around \$0.75 per switch, these switches have caught a surprising amount of attention from the community for the price that they fetch. However, being locked to an unproven company in Gravastar who is clearly iterating upon these designs quickly, the long term availability for these okay-ish performing switches for their price is a bit uncertain.

Other

While it may feel a bit cheap to give switches points based on how they look, these are unambiguously one of the most stunning, artfully designed switches in years and they will be remembered for many years into the future just based on their bold designs alone.
